

Complete Power Quality Service

Solving Power Quality problems require deep understanding of phenomena, insight into real-time measurement and information on system and the load. It is a complex task that only dedicated and specialized teams are able to solve. The solution should be effective and reliable, yet optimal in terms of costs. Avalon Partners has 25 years of experience in solving extremely complex power quality problems to the satisfaction of our customers.

Avalon Complete PQ

Our complete service delivers to you a solution of power quality problem that is both technically and financially optimal. We seek and find the root cause of the problem, and deliver tailor made solution that efficiently deals with it. Simple and effective!

Why Us ?

-  Equipped with state-of-the art analyzers, recorders and professional software.
-  Experienced engineers with power quality as core competence.
-  Expert knowledge, outside-of-box thinking, inventive solutions to specific problems.

Our service comprise:

MEASUREMENT & ANALYSIS

Our state-of-the-art recorders will not miss any event in your grid. This is indispensable source of data for our technical team and root cause analysis.

MODELLING & SCENARIOS

Accurate model of the grid and loads - parameters optimized to match measured responses. A number of what-if scenarios will be tested and optimized.

SPECIFICATION

Our engineering team will deliver the solution and equipment specification that provides optimal power quality results with the least possible investment cost.
